1. Asset and threat - Gyro Zeppeli, whose scholarship (~₩3.5M) is paid to a bank account managed through the student portal. Three assets at once: money, identity (student account), relationship (family group chat). Threat is vishing + impersonation + spear phishing, anchored to two real cases from your deck: the July 2018 Korean "daughter in an accident" call and the 8 July 2025 Changwon District Court fake-delivery warning. Includes the Week 2 Asset/Weakness/Control table as a formatted table.
2. The manipulation - Separates pretext ("your payment was returned, the name doesn't match") from requested action (read back the code / sign in via the SMS link), then works through authority, fear, urgency + secrecy, and familiarity/targeting. Uses the deck's evidence argument: logos, caller ID, and even HTTPS are copyable; the full hostname matters; and via Twilio 2022 and Uber 2022 recognition is not authorization. A prompt for a login you didn't start is a warning sign, not a task.
3. Check and report route Pause (with the deck's verification script), verify through an independently obtained route, plus a family code word as the check that works from another city, and pre-emptive controls (app-based MFA, transfer limits, saved official numbers). Report route uses your slide 48/49 table: university IT, 118 KISA, 112 + the bank for payment suspension, and the "if I already acted" steps. Closes on the supportive-response point and People/Process/Technology.
